Patent No. 5908925
GENERAL INFORMATION:
APPLICANT: Cohen, Margo P.; Shearman, Clyde W.
TITLE OF INVENTION: Genetically Engineered Immunoglobulins
TITLE OF INVENTION: Specificity for Glycated Albumin
                                                                                                                                                                                                                                    CELL TYPE: B-cel

NAME/KEY: CDR-1; CDR-2; CDR-3
LOCATION: aa #31-35; aa#50-66; aa#99-109
IDENTIFICATION METHOD: similarity to known sequences
OTHER INFORMATION: antigen is human glycated albumin
UBLICATION INFORMATION: N/A

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                 Score

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
